Based upon the presence of a Xhol site followed by a run of 14 or
more T residues at the beginning of the sequence, this clone was
polyadenylated. The resulting Poly-T sequence has been removed. hit

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              487 GCTTTCAAACTGTACCCACTAACATGTCACTGAAAATCCACCTTGTCATACGAGCGGTT 428

The invention describes an isolated tumour necrosis factor polypeptide

(TNF). The polypeptide and polynucleotide are useful in controlling
agriculturally important pests, particularly by modifying the growth,
feeding and/or reproduction of crop-damaging insects or insects of farm
animals. The polypeptide and polynucleotide are useful for modulating
c pithalial morphogenesis, cell-matrix adhesion in flies and mammals. Thus
the polypeptide and polynucleotide may be useful for treating,
ameliorating or preventing X-linked anhidrotic (hypohidrotic) ectodermal
dysplasia and X-linked anhidrotic (hypohidrotic) ectodermal
dysplasia and X-linked anhidrotic (hypohidrotic) ectodermal
like disorders, e.g. sparse hair, abnormal or missing teeth or sweat
gland aberrations in animals (e.g. insects and potentially humans),
endotoxic shock, inflammation, haemorrhagic necrosis of tumours,
cytotoxicity and obesity-linked insulin resistance, all of which involve
TNF molecules. This is the amino acid sequence of the Drosophila
melanggaster tumour necrosis factor variant 2 protein, described in the
New Drosophila tumor necrosis factor molecule, useful in controlling agriculturally important pests, e.g. comprises modifying the growth, feeding or reproduction of crop-damaging insects or insects of farm
                                                                                                                                               Claim 6; Fig 3A-C; 119pp; English

New Drosophila tumor necrosis factor molecule, useful in controlling agriculturally important pests, e.g. comprises modifying the growth, feeding or reproduction of crop-damaging insects or insects of farm animals.

Claim 6; Fig 2A-B; 119pp; English.

The invention describes an isolated tumour necrosis factor polypeptide

(TNF). The polypeptide and polynuclectide are useful in controlling
agriculturally important pests, particularly by modifying the growth,
feeding and/or reproduction of crop-damaging insects or insects of farm
animals. The polypeptide and polynuclectide are useful for modulating
cepithedial morphogenesis, cell-matrix adhesion in files and mammals. Thus
the polypeptide and polynuclectide may be useful for reating,
ameliorating or preventing X-linked anhidrotic (hypohidrotic) ectodermal
dysplasia and X-linked anhidrotic (hypohidrotic) ectodermal
dysplasia-in an X-linked anhidrotic (hypohidrotic) ectodermal
dysplasia-in an X-linked anhidrotic and potentially humans),
cland aberrations in animals (e.g. insects and potentially humans),
endotoxic shock, inflammation, haemorrhagic necrosis of tumours,
cytotoxicity and obesity-linked insulin resistance, all of which involve
TNF molecules. This is the amino acid sequence of the Drosophila
melanogaster tumour necrosis factor variant 1 protein, described in the nvention

The invention describes an isolated tumour necrosis factor polypeptide (TNF). The polypeptide and polynucleotide are useful in controlling agriculturally important pests, particularly by modifying the growth, feeding and/or reproduction of crop-damaging insects or insects of farm animals. The polypeptide and polynucleotide are useful for modulating cepithalial morphogenesis, cell-matrix adresion in files and mammals. Thus the polypeptide and polynucleotide may be useful for treating, ameliorating or preventing x-linked anhidrotic (hypohidrotic) ectodermal dysplasia and x-linked anhidrotic (hypohidrotic) ectodermal dysplasia-like disorders, e.g. sparse hair, abnormal or missing teeth or sweat gland aberrations in animals (e.g. insects and potentially humans), endotoxic shock, inflammation, haemorrhagic necrosis of tumours, cytotoxicity and obesity-linked insular resistance, all of which involve TNF molecules. This is the amino acid sequence of the brosophila melanogaster tumour necrosis factor protein, described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TTRVSHLDKELKSLKRVVDDNLQQRLGINYLDEFDEFQKEYENALIDYPKKVDGLTDEEDD 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180

The invention describes an isolated tumour necrosis factor polypeptide (TNF). The polypeptide and polynucleotide are useful in controlling agriculturally important pests, particularly by modifying the growth, feeding and/or reproduction of crop-damaging insects or insects of farm animals. The polypeptide and polynucleotide are useful for modulating controlling and polynucleotide may be useful for modulating the polypeptide and polynucleotide may be useful for reating. Thus the polypeptide and polynucleotide may be useful for reating. Thus the polypeptide and polynucleotide may be useful for reating. Thus the polypeptide and polynucleotide may be useful for reating. Thus the polypeptide and polynucleotide may be useful for reating. Thus the polypeptide and polymenting x-linked anhidrotic (hypohidrotic) ectodermal dysplasia-like disorders, e.g. sparse hair, abnormal or missing teeth or sweat gland aberrations in animals (e.g. insects and potentially humans), endocoxic shock, inflammation, haemorrhagic necrosis of tumours, cytotoxicity and obesity-linked insulin resistance, all of which involve TNF molecules. This sequence represents a tumour necrosis factor peptide contents an antigenic epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tumour necrosis factor; TNF; pesticide; crop-damaging insect; farm animal insect; epithelial morphogenesis; cell-matrix adhesion; X-linked anhidrotic (hypohidrotic) ectodermal dysplasia; X-linked anhidrotic (hypohidrotic) ectodermal dysplasia-like disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                        New Drosophila tumor necrosis factor molecule, useful in controlling agriculturally important pests, e.g. comprises modifying the growth, feeding or reproduction of crop-damaging insects or insects of farm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLO1840-ABLIG175) and the encoded proteins (ABB5773). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tumour necrosis factor; TNF; pesticide; crop-damaging insect; farm animal insect; epithelial morphogenesis; cell-matrix adhesion; X-linked anhidrotic (hypohidrotic) ectodermal dysplasia; X-linked anhidrotic (hypohidrotic) ectodermal dysplasia-like disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAHFHLSSRRRHQGSMGYHGDMYIGNDNBRNSYQGHFQTRDGVLTVTNTGLYYVYAQICY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     요
                                                                                                                                                                                                                                                                                                                                                                     The invention describes an isolated tumour necrosis factor polypeptide (TNF). The polypeptide and polynucleotide are useful in controlling agriculturally important pests, particularly by modifying the growth feeding and/or reproduction of crop-damaging insects or insects of farm animals. The polypeptide and polynucleotide are useful for modulating cepthelial morphogenesis, cell-marrix adhesion in flies and mammals. Thus the polypeptide and polynucleotide may be useful for treating, ameliorating or preventing X-linked anhidrotic (hypohidrotic) ectodermal dysplasia-like disorders, e.g. sparse hair, abnormal or missing teeth or sweat gland aberrations in animals (e.g. insects and potentially humans), condotoxic shock, inflammation, haemorthagic necrosis of tumours, condotoxic shock, inflammation, haemorthagic necrosis of tumours, condotoxic shock inflammation, naumin resistance, all of which involve the molecules. This sequence represents a tumour necrosis factor peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The invention relates to an isolated mucleic acid molecule, Zis-SR, encoding a protein involved in the secretory pathway in a cell( or its homologue or variant) or mucleic acid molecules that hybridise under high stringency condition to the Zis-SR mucleic acid. Also included are an isolated polypeptide involved in the formation of secretory granules in cells comprising the amino acid sequence spanning amino acids 243-310 of the Zis-SR protein, restoring the neuroendocrine differentiation of a cell using the nucleic acid molecule or polypeptide cited above, identifying a gene and/or protein involved in inducing regulated secretion-defective cell line under conditions that restore differentiation of the secretion-defective cell, such that secretion is restored, and the secretion-defective cell, such that secretion is restored, and the secretion-defective cell, such that secretion of the conditions cited.

Also included are modulating the secretion in a cell comprising an escretion-defective cell, such that secretion of the conditions cited.

Also included are modulating the secretion in a cell comprising an escretion of a biological activity of Zis-SR, its part or derivative in the presence of a candidate agent, where a modulator of regulated secretion is selected when the biological activity of Zis-SR, its part or derivative is measurably different in the presence of the candidate compared in its absence. The nucleic acid molecules or polypeptides are useful for regulating neuroendocrine phenotype, and for long term therapies to treat diseases or conditions associated with a loss of function, e.g. diabetes, neurodegenerative diseases such as a loss of function, e.g. diabetes, neurodegenerative diseases such as a loss of function, e.g. diabetes, conditions associated with a defect in the regulated secretory pathways in cells. The nucleic acid molecules can also be used to locate gene regions associated with genetic diseases. The present expresence conditions associated with an alloin with expressing companial sel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           12; preparing a medicament for modifying the endogenic flora of humans and other mammals. The vaccine is useful for immunising against yeast or fungal infections. Apoptosis-related diseases include autoimmune disease, ischaemia, diseases related with viral infections or neurodegenerations. This sequence represents a polypeptide associated with the Bax gene described in the disclosure of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel nucleic acid representing a synthetic Bax gene. The Bax gene of the invention is useful for identifying Baxesistant yeast or fungi, identifying, or obtaining and identifying Candida spp. sequences that are differentially expressed in a pathway eventually leading to programmed cell death or identifying inhibitors or inhibitor sequences of Bax-induced cell death. The products of the invention have cytostatic, fungicide; immunosuppressive, virucide and vasocropic activity and can be used in vaccines or for gene therapy. The isolated nucleic acids, polypeptides, pharmaceutical compositions, antisense molecules and antibodies are useful as medicaments or in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid representing a synthetic BAX-gene, useful as medicament for treating, preventing and/or alleviating yeast or fungal infections or proliferative disorders, or for preventing apoptosis in

                                                                                                                  by chromosome 2 of the human malarial parasite, plasmodium falciparum. Also described are: (1) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II): (I) and polyclonal antisers or a monoclonal antibody raised to imfection. (I) and polyclonal antisers or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. (I) (sepecially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum. Sequencing of the codenist of dentify drug resistance in P. falciparum. Sequencing of the concoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70287 and AAB18144 to AAB18352 invention, but which are not specifically mentioned within the specification

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            129 PKPEQNEEEDNETEAGQQQPASDASADESSDSSANVSPTSSSSSSEEEEEDYRPKRTRQA 188
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RKSRSIAD-----VRNEEQNIQCMHTELQEKSSNEATS--KESPAPLHHRRRMHSRHR 258

The present amino acid sequence is the human RNA-associated protein-8 (RNAAP-8), identified in Incyte clone 869184 derived from LUNGASTO1 library. It is expressed in reproductive, nervous, gastrointestinal and haematopoletic/fimune tissues. It has cytostatic, immunosuppressive, antinflammatory, antiarteriosclerotic, hepatotropic, keratolytic, neuroprotective, antiarterio, anti-HIV, antiallergic, antirheumatic, virucide, antiarthritic, opthalmological and antimicrobial activity. RNAAP antibodies are useful for diagnosis of diseases associated with proliferative, autoimmune, inflammatory and infectious disorders, inclinic keratosis, bursitis, arteriosclerosis, artherosclerosis, cirhosis, hepatitis, myelofibrosis, mixed connective tissue disease, cirhosis, hepatitis, myelofibrosis, mixed connective tissue disease, contrantial, primary thrombocythemia and cancer, HIV, allergies, containts, inferiors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          12;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DEEDDDDGDGLDSIADDEDDDVSYSSVDD-----VGADYEDYTDMLNKLNNA-----HTG 165

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS7137-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      237
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 429
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                81 LOORLGINYLDEFDEFOKEYENALIDYPKKVDGLTDEEDDDDGDGLDSIADDEDDDVSYS 140

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the isolation of novel human neoplastic disease associated polypeptides, and cDNA (AAS34767-AAS35050) and DNA sequences encoding for these polypeptides. The sequences of the invention sequences encoding for these polypeptides. The sequences of the invention disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative disorders (alsorders, pandult liver cancer, childhood cerebellar astrocytoma, or hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders, reproductive disorders, jamune system disorders, muscular disorders, reproductive disorders and renal disorders. The polymucleotide sequences of the invention are also useful in gene therapy. AM011568-AM01361 represent the novel human neoplastic disease associated polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was contained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    75 KRVVD-----NLQQRLG-----INYLD-----EFDEFQKEYENALIDYPKKVDG 113

```
The invention relates to novel isolated nucleic acid molecules (I)
encoding human secreted DNA repair and processing proteins (II). (I) and
encoding human secreted DNA repair and processing proteins (II). (I) and
(II) are used to prevent, treat or ameliorate a medicial condition e.g. in
humans. (I) and (II) may be used in the prevention, treatment and
eiganosis of diseases associated with inappropriate expression of (II),
cereased expression of (II) by rectifying mutations or deletions in a
decreased expression of (II) by rectifying mutations or deletions in a
patient's genome that affect the activity of (II). (I) and complementary
cerease chain reactions (PCR) to detect and quantitate the presence
C patients and also be used as DNA probes in diagnostic assays (e.g.
co journaliar sequences in samples, and so which patients may be in need of
crestorative therapy. (II) may also be used as antigens in the production
of antibodies and in assays to identify modulators (agonists and
antibodies and antagonists may also be used to down regulate expression
and activity of (II). The anti-(II) antibodies may also be used as
disorders include e.g. immune/autoimmune diseases (e.g. human
cc and multiple sclerosis, cancers and hyperproliferative disorders (e.g.
mulmondeficiency virus (HIV), infections, anaemia, rheumatoid arthritis
cmelanomas), neurological diseases (e.g. Alzheimer's disease and
carrest, angina and thrombosis), infections caused by bacteria, viruses
